Lognormal measurement error ($\sigma = 1$: skewness 6.18, excess kurtosis 110.9), $c_3(\varepsilon) = 1.0$, $n = 1000$, $M = 2000$
the regime in which the tessarine system (13) of Woolsey and Huang has no real solution
(a) $\beta_1 = +1$
(b) $\beta_1 = -1$
per cent of replications
guard-clip rate
(c)
(d)
bias(β_1)
(e)
(f)
MSE ratio against TC-LS
(above 1: worse than TC-LS)
reliability λ
TC-LS (corrected least squares)
TC-PMM2, transplanted weight t
TC-PMM2, transplanted t (adaptive)
TC-PMM2*, re-optimised t_{opt}
TC-PMM2* (adaptive t)
cumulant-deconvolution guard clip rate
(shared by both adaptive variants)
